51 & 52 Series II

Introduction

The Fluke Model 51 and Model 52 Thermometers (“the thermometer”) are microprocessor-based, digital thermometers designed to use external J-, K-, T-, and E-type thermocouples (temperature probes) as temperature sensors.

Use the thermometer only as specified in this manual. Otherwise, the protection provided by the meter may be impaired.

Refer to safety information in Table 1 and meter symbols in Table 2.

Table 1. Safety Information

⚠Warning

A Warning identifies conditions and actions that pose hazards to the user. To avoid electrical shock or personal injury, follow these guidelines:

- **Before using the thermometer inspect the case. Do not use the thermometer if it appears damaged. Look for cracks or missing plastic. Pay particular attention to the insulation around the connectors.**
- **Disconnect the thermocouple(s) from the thermometer before opening the case.**
- **Replace the batteries as soon as the battery indicator (🔋) appears. The possibility of false readings can lead to personal injury.**
- **Do not use the thermometer if it operates abnormally. Protection may be impaired. When in doubt, have the thermometer serviced.**
- **Do not operate the thermometer around explosive gas, vapor, or dust.**
- **Do not apply more than the rated voltage, as marked on the thermometer, between the thermocouple(s), or between any thermocouple and earth ground.**

Table 1. Safety Information (cont.)

⚠Warning (cont.)

- ***Model 52:*** **Measurement errors may occur if voltages on the measurement surfaces result in potentials greater than 1 V between the two thermocouples. When potential differences are anticipated between the thermocouples, use electrically insulated thermocouples.**
- **When servicing the thermometer, use only specified replacement parts.**
- **Do not use the thermometer with any part of the case or cover removed.**

Caution

A Caution identifies conditions and actions that may damage the meter or the equipment under test.

- **Use the proper thermocouples, function, and range for your thermometer.**
- **Do not attempt to recharge the batteries.**
- **To prevent explosion, do not throw batteries into a fire.**
- **Follow local laws or regulations when disposing of batteries.**
- **Match the + and – polarities of the battery with the battery case.**

Using the Thermometer

1. Plug the thermocouple(s) into the input connector(s).
2. Press ⏻ to turn on the thermometer.

After 1 second the thermometer displays the first reading. If no thermocouple is plugged into the selected input or the thermocouple is "open," the display shows "**- - - -**"

Changing Setup Options

Use Setup to change the thermocouple type, offset, sleep mode, and line frequency settings.

The thermometer stores the settings in its memory. Setup settings reset only when the batteries are removed for more than 2 minutes.

Entering or Exiting Setup

When the thermometer is in Setup mode, the display shows **SETUP**.

- Press SETUP to start or exit Setup.

Setup Options

Option	Menu Item	Settings
Thermocouple Type	**TYPE**	**J, K, T,** or **E**
Offset	**OFFSET**	**T1** or **T2** (Model 52)
Sleep Mode	SLP	on (sleep mode on) or OFF (sleep mode off)
Line Frequency	LinE	**50 H** (50 Hz) or **60 H** (60 Hz)

Changing a Setup Option

1. Press △ or ▽ to scroll to the setup option you want to change.
2. Press ENTER to indicate that you want to change this setting.
3. Press △ or ▽ until the setting you want to use appears on the display.
4. Press ENTER to store the new setting in memory.

Notes

Setup is disabled in MIN MAX mode.

Offset:

The primary display shows the temperature plus the offset and the secondary display shows the offset. Remember to reset the offset to 0.0 when it is no longer needed. The offset automatically resets to 0.0 when you change the thermocouple type. Model 52: You can store individual offsets for T1 and T2.

Sleep mode:

The thermometer enters sleep mode if no button press occurs for 20 minutes. Pressing any button wakes the thermometer and returns it to its previous state. Sleep mode becomes enabled each time you turn on the thermometer and is automatically disabled in MIN MAX mode.

Line frequency:

For optimum rejection of line noise, the thermometer must be set for the local line frequency.

Measuring Temperatures

Connecting a Thermocouple

To change the thermocouple type, see “Changing Setup Options.” The North American ANSI Color Code is:

Type	J	K	E	T	N
Color	Black	Yellow	Purple	Blue	Orange

1. Plug a thermocouple into the input connector(s). (Make sure that the polarity is correct.)
2. Set the thermometer for the correct thermocouple type.

Displaying Temperatures

1. Press °C°F K to select the correct temperature scale.
2. Hold or attach the thermocouple(s) to the measurement location.

   The temperature reading appears in the primary display.
3. *Model 52:* Press T1 T2 T1-T2 to toggle between showing the T1, T2, and T1-T2 readings in the primary or secondary display.

Notes

The display shows "- - - -" when a thermocouple is not connected.

The display shows OL (overload) when the temperature being measured is outside the thermocouple’s valid range.

Model 52: If only thermocouple T2 is connected, the T2 reading appears in the primary display.

Holding the Displayed Readings

1. Press HOLD to freeze the readings on the display.

   The display shows **HOLD**.

2. *Model 52:* Press T1 T2 T1-T2 to toggle showing the T1, T2, or T1-T2 readings in the primary or secondary display.

3. Press HOLD again to turn off the HOLD function.

Viewing the MIN, MAX, and AVG Readings

1. Press MIN MAX to step through the maximum (MAX), minimum (MIN), or the average (AVG) readings.

   The elapsed time since entering MIN MAX mode, or the time at which the minimum or maximum occurred, appears on the display.

2. Press ⬭, MIN MAX (CANCEL) to exit MIN MAX mode.

Using the Offset to Adjust for Probe Errors

Use the offset option in Setup to adjust the thermometer's readings to compensate for the errors of a specific thermocouple.

The allowable adjustment range is ± 5.0 °C or K, and ± 9.0 °F.

1. Plug the thermocouple into the input connector.

2. Place the thermocouple in a known, stable temperature environment (such as an ice bath or a dry well calibrator).

3. Allow the readings to stabilize.

4. In Setup change the offset until the primary display reading matches the calibration temperature. (See "Changing Setup Options.")

Maintenance

Replacing the Batteries

Refer to the safety information in Table 1 before replacing the batteries.

1. Turn off the thermometer if necessary.
2. Loosen the screw and remove the battery door.
3. Replace the three AA batteries.
4. Replace the battery door and tighten the screw.

Cleaning the Case and Holster

Use soap and water or a mild commercial cleaner.

Wipe with a damp sponge or soft rag.

Calibration

To ensure that the thermometer performs to its accuracy specifications, Fluke recommends that you calibrate the thermometer annually, starting one year after purchase.

To calibrate the thermometer, contact Fluke for the Service Center nearest you or follow the calibration procedure in the service manual listed in "Replacement Parts and Accessories."
