Highest Port Density Performance Analysis System SmartBits® 6000C

Product Overview

Spirent Communications' SmartBits 6000C chassis is the industry's highest-port-density network performance analysis test system. Each chassis can support up to 12 slots of a wide variety of test modules to suit port density and technology needs.

Multiple SmartBits 6000C chassis can be interconnected to achieve ultra high-port density, enabling users to perform automated large scale testing in Quality Control and high-volume production environments. Up to 8 chassis can be synchronously connected together using a simple cable; this can be extended up to 512 chassis using SmartBits multi-chassis extension units.

The SmartBits 6000C is easily controlled by a host computer through a 10/100 Mbps Ethernet connection and uses a Windows®, Linux, or Solaris-based interface.

The SmartBits 6000C Is Designed For:

- **Network Equipment Manufacturers:** Perform ultra highport density for engineering, production, and QA testing.
- **Evaluation Labs:** Test and certify different devices from various manufacturers to benchmark their performance.
- **Telcos/ISPs/Enterprise Users:** Perform comparative analysis of network equipment to determine suitability to a specific application prior to deployment.
