Tektronix Logic Analyzers

▶ TLA7NAx Logic Analyzer Modules

▶ The TLA Series logic analyzers modules offer the highest performance for today's demanding applications.

Breakthrough Solutions for Real-time Digital Systems Analysis

The TLA7NAx Logic Analyzer Module speeds debug and verification of fast buses and complex embedded systems with an industry-leading combination of acquisition, triggering and analysis capabilities. Quickly debug fast buses like DDR memory and PCI-X, using long record length to capture intermittent events over a wide time window and MagniVu high-speed timing to simultaneously capture glitches as small as 125 ps. The TLA7NAx module's advanced triggering capabilities allow you to trigger on microprocessor operation failures, which speeds troubleshooting of embedded systems incorporating microprocessors such as the PowerQUICCIII. Additional tools like source code and protocol analysis and listing view make monitoring and debugging processor operation faster and easier.
