OneExpert CATV

A full-featured handheld for technicians at any skill level

OneExpert™ CATV helps field technicians fix problems right—the first time. A technician-friendly interface and OneCheck™ automated tests ease complex tasks with a simple dashboard that shows clear pass/fail results. And its future-proof modularity ensures years of use supporting CATV networks.

Comprehensive Tools Increase Productivity

We built expertise into OneExpert so that technicians at any skill level can quickly optimize performance. With a modular platform that adapts easily to rapidly changing technologies, OneExpert CATV is:

- Simple — Auto channel identification eliminates channel plan build, maintenance, and deployment overhead and enables automated testing without the potential for channel plan related test failures
- Fast — OneCheck uses powerful processing and exceptional speed to make more complete testing practical: a tech can run a comprehensive test, including MER and BER on all channels, in about a minute
- Powerful — More intelligent, powerful algorithms running in the background while testing enables the meter to point out any problems and suggest next troubleshooting steps

Benefits

- Simplifies and speeds testing and troubleshooting
- Improves compliance and audit performance
- Reduces rework
- Turns any technician into an expert

Features

- Real-time channel identification eliminates the need for channel plans and plan-related errors
- 32x8 DOCSIS® 3.0, DOCSIS 3.1, WiFi, 1 Gigabit Ethernet capable, and TrueSpeed™ option
- Field-exchangeable DOCSIS/RF module
- A unique dual-diplexer design supports 42/85 or 65/204 MHz networks
- WiFi 2.4/5 GHz, Bluetooth, StrataSync™ enabled
- Simultaneous ingress and downstream testing
- Optional fiber scope and power meter
- Optional ISDB-T Module

Applications

- Troubleshooting QAM carriers/home networks
- Verifying WiFi in 2.4 GHz and 5 GHz networks
- Turning up business services
- Testing Gigabit DOCSIS services
- Installing PON/RFoG including inspection, power levels, and RF performance
- Optional IP video testing
- Optional home leakage testing

OneCheck dashboard simplifies identifying RF issues

Fast and easy connectivity, optional fiber scope and power meter

High-Powered Simplicity Turns Every Technician into an Expert

With OneExpert, expertise is built-in. We took decades of testing experience and incorporated that knowledge in a way that makes every technician an expert with the simple press of a button. OneExpert simplifies a technician's decision-making process by focusing on three primary tests:

- OneCheck comprehensive and automated testing of ingress, downstream and DOCSIS with Session Expert™ to help resolve problems
- DOCSISCheck™ real-time analysis and powerful troubleshooting of upstream and downstream DOCSIS carriers and data services
- ChannelCheck real-time analysis and powerful troubleshooting of downstream carriers

Additional OneExpert test capabilities ensure technicians master any QAM, OFDM, PON/RFOG, IP video, business-service, or home-network challenge. Its future-proof design adapts easily to rapidly changing technologies, assuring low total-cost-of-ownership.

AutoChannel™

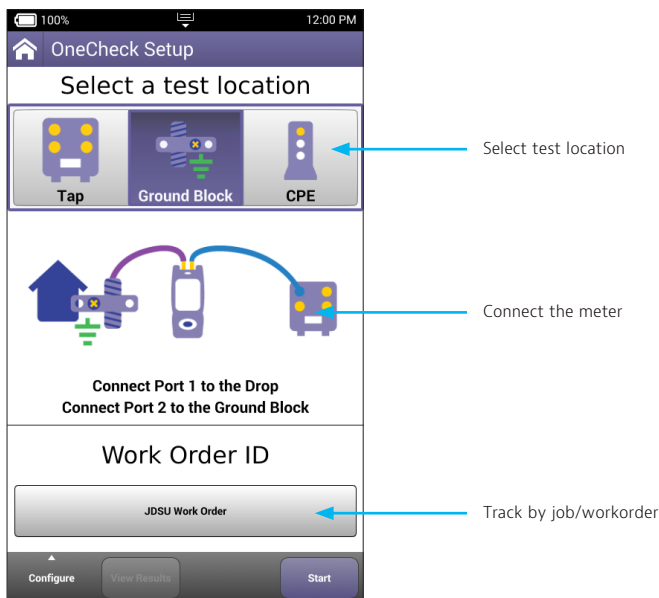

To simplify the testing process and day-to-day maintenance, the AutoChannel feature automatically identifies and instantly builds correct channel plans for testing QAM, DOCSIS, and analog services. It eliminates the need for managers and supervisors to pre-build and configure the meter before a technician can use the instrument. It also eliminates the need for the technician to choose the correct channel plan for the part of the system that they are working on, saving time and reducing improper testing.

OneCheck™

Home environments typically require testing ingress on the upstream, downstream carrier quality, and DOCSIS performance.

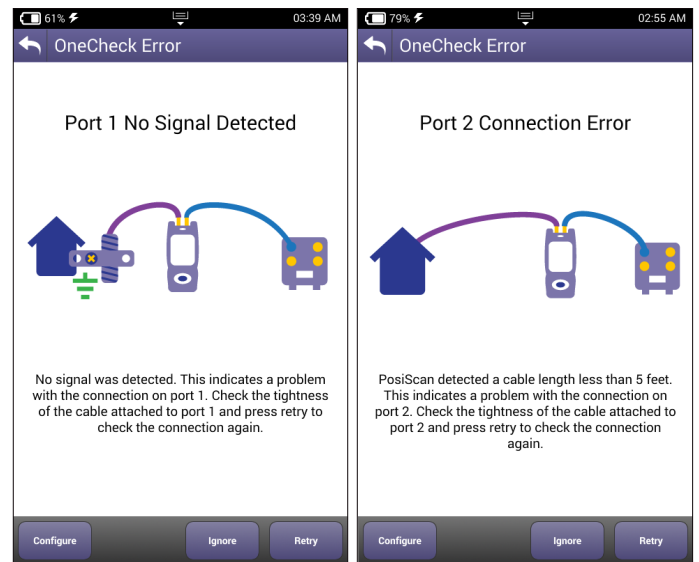

OneCheck is a fast and comprehensive test at three demarcation points: the tap, ground block, and CPE. Initiating the test is simple. The technician chooses the test location, enters the current job or work order, and starts the test.

DuoPort™ with PosiScan™

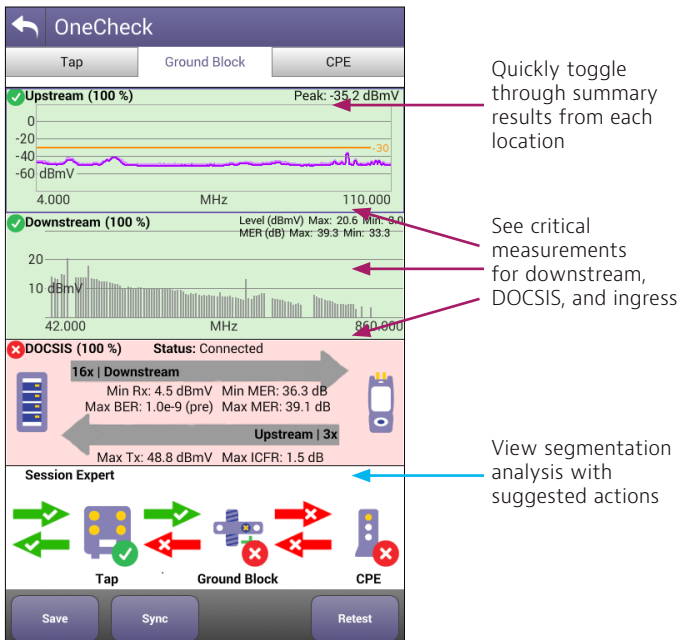

To help ensure that technicians properly connect their instruments and take valid ingress and downstream scans, OneExpert uses VIAVI exclusive DuoPort design with PosiScan. With DuoPort, one port scans ingress from the house while another port simultaneously tests downstream services. PosiScan increases compliance by making sure that a technician is properly connected to a unique home for each job before testing. This can dramatically reduce rework metrics by helping ensure that the technician scans the proper ingress.

Technicians see improper connections before testing

A Simple Dashboard and Drill-Down Details

The dashboard displays all critical parameters including worst carrier MER, maximum transmit level, and in-channel frequency response (ICFR) of upstream carriers. Progress bars indicate status and immediately show if tests are passing or failing. For drill-down details, tapping a panel such as downstream or DOCSIS displays all carrier line-test details for quick problem identification.

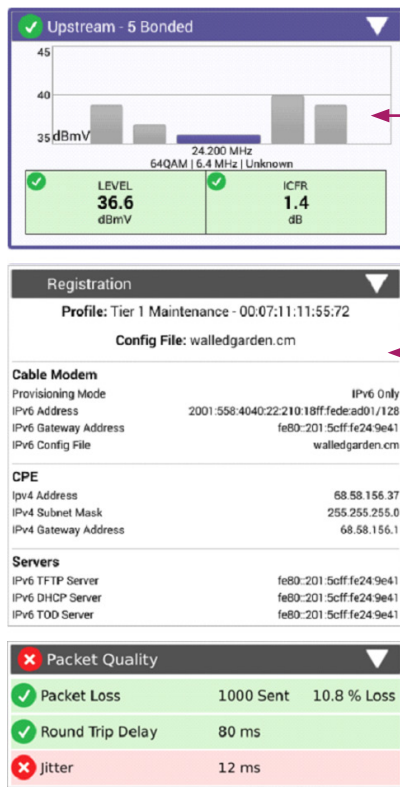

During any specific test, OneExpert simultaneously performs a powerful suite of additional tests in the background. By simply swiping through results, technicians can evaluate system wide performance including MER and BER across all channels, DOCSIS results (showing individual channel details), SmartScan results, and off-air ingress such as LTE carriers that are infiltrating the plant and causing problems.

Downstream Details

DOCSIS Details

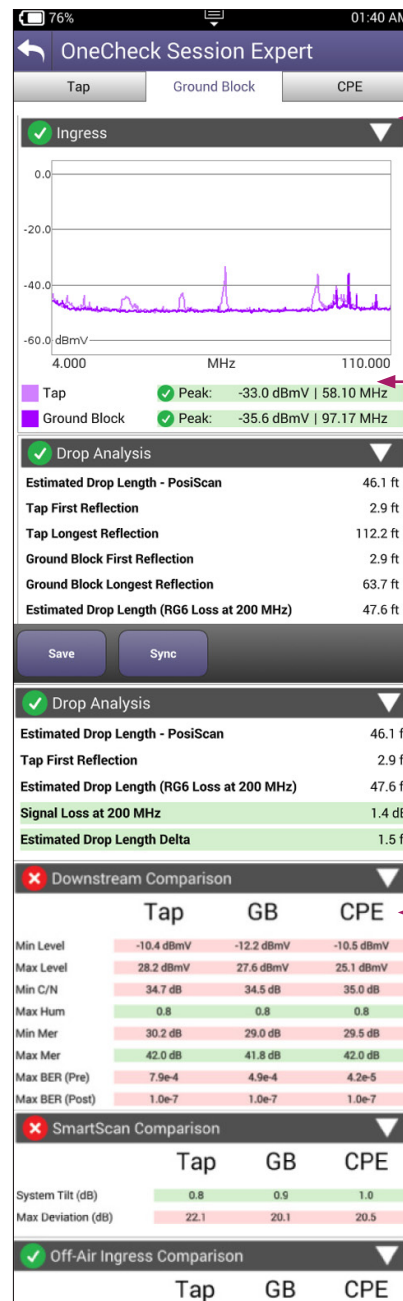

Easily view each upstream carrier including TX level and ICFR value

See internal modem details and identify server issues

Identify if packets are being lost over the RF portion of the data layer

Session Expert Details

Session Expert leverages additional expertise and processing power to provide the technician with tools to help divide and conquer problems between the TAP, GB, and CPE. Background measurements like Posi-Scan are used to verify drop integrity.

Compare scans between the TAP and GB to see where ingress occurs

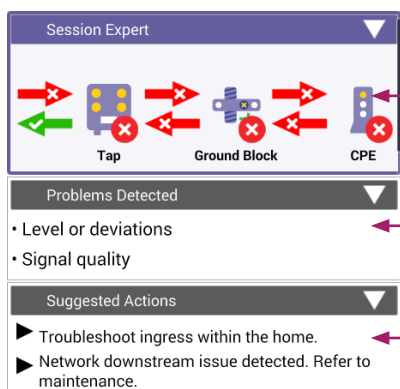

Identify problems in the drop between the tap and ground block

Compare measurements side-by-side between TAP, GB, and CPE to speed up technician analysis time and reduce callbacks

Session Expert

Troubleshooting between demarcation points made easier

Session Expert is test location aware (tap, ground block, CPE) to help guide technicians to problems and ease troubleshooting between demarcation points. Built-in intelligence reduces learning time and helps resolve problems with less escalation or supervisor input.

View upstream and downstream status between locations

Use background intelligence to analyze test data and identify core problems

See prioritized suggested next steps to find and fix problems based on best practices

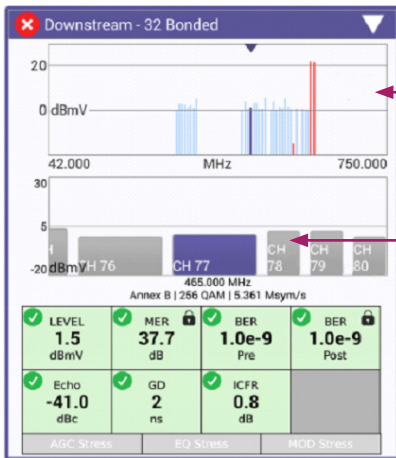

DOCSISCheck

OneExpert simplifies DOCSIS service troubleshooting with automatic downstream DOCSIS channel identification and up to 32x8 bonded system operation. OneExpert harnesses parallel processing to provide multiple test results to the technician through a single interface. The user can simply swipe through the results to identify and eliminate physical layer and data layer problems.

Identify upstream and downstream bonding with highlighted key metrics

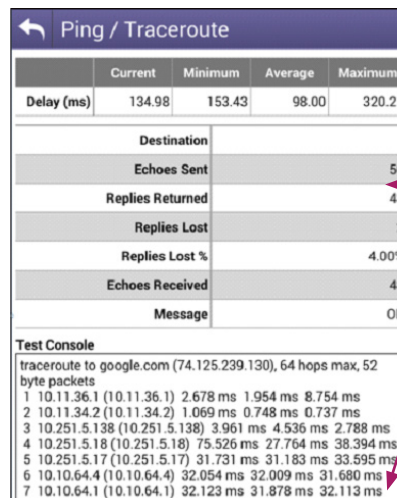

- Downstream testing — by testing all the carriers within a bonding group simultaneously, technicians can quickly identify if problems lurk in the physical layer. And OneExpert works with up to 5 different DOCSIS profiles to test different provisioning.

Touch a highlighted problem for quick access to troubled carriers

Swipe the screen to quickly access individual DOCSIS channel details

- Service testing — OneExpert tests throughput over DOCSIS up to 1 G.

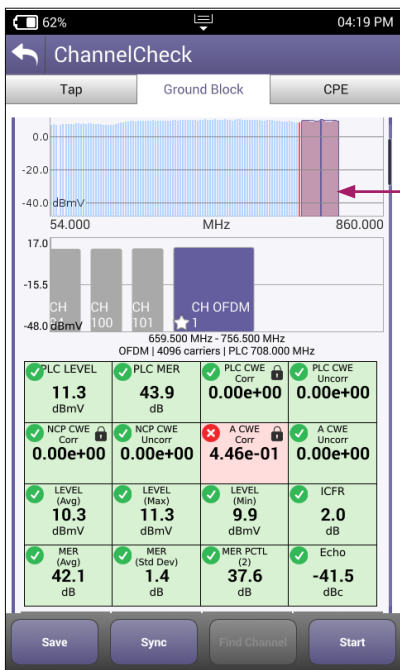

Isolate problems on the data layer with Ping/Traceroute

- Upstream testing — OneExpert is ready to test evolving return paths. It can automatically switch to an 85 MHz diplexer in expanded systems where operators can bond up to 8 upstream carriers.

View upstream ICFR for problem isolation and correlation with PNM tools

Identify downstream OFDM carrier in the lineup

Downstream scan measurement requires no learning curve, same as DOCSIS 3.0 scan, but shows OFDM signal

Overall OFDM carrier performance metrics including best and worst case; simple pass/fail indications

DOCSIS 3.1 Testing

With OneExpert, DOCSIS 3.1 testing is very intuitive. DOCSISCheck automatically identifies and locks on the 32 bonded QAM signals and the OFDM signal, so operation and results analysis is very similar to DOCSIS 3.0. Testing only the physical layer is inadequate to effectively analyze DOCSIS 3.1 performance. OneExpert uses a DOCSIS 3.1 chip set to test the service layer, enabling IP-related tests including throughput, codeword errors, and profile analysis.

ChannelCheck

When problems arise that require live, real-time troubleshooting, ChannelCheck provides a powerful suite of tests that help track down tough intermittent issues without requiring a technician to have years of field experience. ChannelCheck automatically performs an extensive set of measurements and analysis to help technicians quickly identify the root cause, if the problem is something they should fix, or if it requires escalation.

MER over entire OFDM channel provides insight into why higher-tier profiles are failing

PROFILE ANALYSIS

| PROFILE | LOCKED | CWE (Corr) | CWE (Uncorr) |
|---------|--------|------------|--------------|
| A | YES | 3.36e-02 | 0.00e+00 |
| B | YES | 1.00e+00 | 0.00e+00 |
| C | NO | --- | --- |
| NCP | YES | 0.00e+00 | 0.00e+00 |
| PLC | YES | 0.00e+00 | 0.00e+00 |

Analysis of different profiles available and which profiles can be supported at test location

In-Channel Response identifies roll-off and excessive ripple

Spectrum and noise identify portions of carrier where degradation may occur

Discover embedded ingress with ingress under the carrier trace

Monitor plant fluctuations with Level Over Time

IP Data — Web and Speed Testing

Internet subscribers demand reliable connectivity and new applications require higher data throughput and network-delay time performance. OneExpert quickly tests internet connectivity using a built-in web browser. It tests data rates provided by DOCSIS with HTTP throughput for TCP/IP applications. Mature tests like IP ping delay are essential for real-time applications such as online gaming.

Home Leakage Testing

Installation and service technicians perform “pressure tests” on home networks to accentuate any breaches in RF shielding integrity that can enable ambient RF in the home to get into the closed network (ingress). The OneExpert CATV (or DSP meter) can be fitted with an antenna and a “leakage” software option that enables it to receive signals leaking during a pressure test. The tech connects a hand-held Seeker HL (Home Leakage) transmitter to the drop at the tap or to the ground block to inject high level signals in the aeronautical and LTE frequency ranges. The tech then walks throughout the house and when a signal is detected the meter emits a tone that varies in pitch with the received field strength. This test is very effective in locating home network trouble spots, so they can be eliminated while the tech is there for installation for service. This saves the tech time in troubleshooting as it eliminates a time-consuming trial and error method.

Measure leakage in aeronautical and LTE frequency bands simultaneously

ISDB-T Testing

An optional add-on module provides the OneExpert CATV with the ability to measure ISDB-T signals used in Japan for off-air video. The ONX incorporates basic power level measurements for ISDB-T within OneCheck and Channel Check. Detailed carrier analysis of ISDB-T signals in the ISDB-T Expert application measures the MER, BER, constellation, and detailed channel parameters of Layer A, B, and C.

Table 1. IP data tests

OneExpert web browser

| IP Data Test | What It Tests | Why It Is Needed |
|---------------------|--------------------------------|--|
| User authentication | IPoE, PPPoE, IPv4, and IPv6 | Customer service turn-up |
| Web browser | Connection to any website | Differentiates between network problems and web-server downtimes and isolates customer PC or mobile devices as points of failure |
| IP ping | Delay time through the network | Network delay is crucial, especially with high-interaction applications such as gaming |
| FTP/HTTP throughput | Upload and download rates | DOCSIS profile parameters such as IP, delay, and network aggregation issues, determine user-experienced data speeds |

Mobile App

The OneExpert iOS app speeds testing, letting technicians leave the test set plugged in at one location and run tests remotely from their iPhone or iPad.

WiFi

Wireless devices and networks are increasingly common in households. With WiFi Scan, technicians have wireless 802.11 a/b/g/n (2.4 GHz and 5 GHz) testing capability to view signal strength, secure set identification (SSID), configured channel, security, MAC address, and 802.11 protocol at the test location of each wireless network in the area. It also indicates whether a network is secure or vulnerable to security threats.

Identify overlapping channels and relative signal strength

Using a single WFED-300AC device, users can quickly visualize, optimize, and troubleshoot WiFi networks with BSSID, Channel, and Spectral views. BSSID view provides quick visibility into active wireless networks and identifies the least-crowded channel to use for an access point. Channel view finds the best channels for an access point by showing utilization, noise, co-channel interferers, adjacent channel interferers, and an overall channel score for each channel. Spectral view shows damaging RF interference with a real-time spectral analyzer configurable by 802.11 band, channel, and channel width.

Table 2. WiFi tests

| WiFi Test | What It Tests | Why It Is Needed |
|-----------|--|--|
| WiFi scan | WiFi access point (AP) station scan | Discover potential interfering networks (which could cause slow data transfer speeds), and locate weak spots in the WiFi signal to help optimize router location |
| WiFi AP | Connect OneExpert CATV via Ethernet cable to a router or residential gateway to configure as a WiFi AP (Ethernet bridge to WiFi) | Verify Internet connectivity, configure CPE, and run tests from mobile devices |

| WiFi Test | What It Tests | Why It Is Needed |
|---------------------------|---|--|
| BSSID details | View information for a specific AP | Determine whether an AP is running in legacy mode or with outdated security settings |
| BSSID view | View all APs by channel | See the WiFi environment across 2.4 GHz and 5 GHz bands to visually determine crowded channels |
| Channel view | Displays channel utilization, noise, channel score, and best channels | Quickly determine the best channel for WiFi deployment and troubleshooting |
| Spectral analyzer | Real time 802.11 and non-802.11 spectrum | Locate interference sources such as Bluetooth devices and microwave ovens |
| Site Assessment Assistant | Works with WiFi Advisor to determine throughput of a WiFi system | TrueMargin™ is the measure of throughput in the actual environment |

OneExpert CATV controls the Wifi Advisor for single-ended operation — troubleshoot common WiFi problems quickly

OneExpert CATV supports the Wifi Advisor for dual-ended operation — whole-home performance testing optimizes AP placement, ensures resilient WiFi network installation, identifies sources of WiFi degradation, and educates/sets proper end-user expectations on real WiFi performance

RSSI view per channel

The test application identifies the best channel for WiFi service

Consolidate Your Test Investment

WiFi Advisor is fully integrated with the OneExpert broadband to the home test platform. This power combination allows you to test fiber, cable and the home WiFi network. The flexible VIAVI platform architecture helps customers maximize their overall investment in broadband to the home test tools.

There are two ways you can consolidate your toolset and minimize both OpEx and CapEx:

- Control a single WiFi Advisor from OneExpert to do BSSID, Spectral, and Channel View testing—this lets you avoid purchasing a separate tablet device to host the WiFi Advisor application and reports because OneExpert hosts it
- Conduct two-ended testing with a single WiFi Advisor, a tablet, and OneExpert—this eliminates the need for two WFEDs

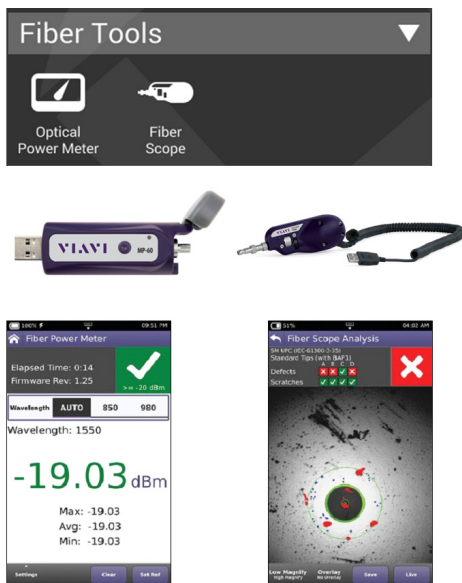

WiFi Advisor SmartChannel Wizard

Optimize and troubleshoot home WiFi networks with WiFi Advisor SmartChannel Wizard, a simplified user interface on the OneExpert CATV. The wizard summarizes the KPIs and the health of the selected BSSID and the channel in which it resides. The summary will help novice users and guide them to a resolution for each metric that is not optimal with practical optimization guidance. The Wizard sees beyond access point occupancies into the client detail of the entire customer network and the clients or any co-channel-sharing networks. The test mode is accessible under “Single-Ended Troubleshooting.”

Fiber

Broadband CATV networks and broadband triple-play services often rely on fiber networks. For point-to-point fiber installations such as FTTC or business connections, field technicians can use the OneExpert CATV together with the VIAVI MP-60 or MP-80 USB optical power meter (OPM) to ensure that fiber cable attenuation meets system requirement performance and is ready to survive network aging and environmental impacts. In combination with a VIAVI SmartPocket optical laser source (OLS), the OneExpert CATV equipped with an MP-60 or MP-80 OPM can automatically perform optical link loss measurement at different wavelengths—resulting in a faster and more comprehensive fiber test.

Using the P5000i optical fiber scope, technicians can test the #1 cause for troubleshooting in optical networks—contaminated fiber connectors. The P5000i provides pass/fail analysis based on user-selectable acceptance profiles.

OneExpert integrates seamlessly with VIAVI optical power meters and fiber microscopes

Table 3. Fiber Tests

| Fiber Test | What It Tests | Why It Is Needed |
|---------------------|---|--|
| Optical fiber scope | Pass/fail against a predefined profile; includes dual magnification | Contaminated fiber connectors are the #1 cause for troubleshooting in optical networks |
| Optical power level | Optical power level with pass/fail and reference values | Optical loss must be within budget at ONU site |

SmartID

Sweep the full 1.6 GHz frequency range for performance verification and troubleshooting in two-ended tests. The devices can be used to test a coax network and locate splitters or impairments. The results are intuitively displayed in a frequency response graph, qualification summary, and details for each path tested, including an ingress analysis result for each probe.

TrueSpeed

Broadband IP networks and their throughput speeds are non-deterministic and their behavior is unpredictable. OneExpert CATV with TrueSpeed provides a standardized RFC-6349 speed test to measure the throughput at the TCP application layer just as a user would experience it. Other methods, such as FTP upload/download, cannot accurately test ultra-fast broadband rates.

OneExpert CATV TrueSpeed throughput test

Table 4. TrueSpeed tests

| TrueSpeed Test | What it Tests | Why is it Needed? |
|----------------------------|--|---|
| Actual rate (up/down) | Actual achieved TCP throughput | Measure throughput as customers experience it at the application layer |
| Ideal rate up/down) | Baseline for achievable TCP throughput without physical layer overhead | Provides a baseline for an ideal-expected-TCP throughput based on the physical layer rate |
| TCP efficiency | Ratio of Successful TCP transmitted without retransmission to the total TCP transmitted. | A large throughput isn't very useful for the customer if a lot of IP packets need to be retransmitted |
| Round trip time (RTT) | Baseline round-trip delay measurement | Calculate the bandwidth delay product (BDP) to identify impact of RTT to network throughput |
| Maximum segment size (MSS) | Test-optimized segment size to achieve maximum throughput speed | Per RFC-4821 to ensure that the TCP payload remains unfragmented and unnecessary IP overhead is avoided |

VoIP

The OneExpert CATV is the ideal test tool to quickly place VoIP calls and verify QoS via mean opinion score (MOS) values. An Ethernet interface tests VoIP anywhere in the access network, replacing the VoIP phone. The OneExpert also includes an Auto Answer mode in which the unit automatically responds to an incoming call. VIAVI provides a wide range voice decoding controls such as G.711, G.722, G.723, G.726, and G.729.

| VoIP Test | What It Tests | Why It Is Needed |
|---------------------------------------|--|--|
| Service setup/provisioning | Registration with gateway as a SIP VoIP client | User setup and server availability. VoIP clients and servers can have complex setups — preclude setup errors |
| Connectivity beyond signaling gateway | Placing test calls on and off network | Call connection from VoIP-to-VoIP and VoIP-to- public switched telephone network (PSTN) |
| Call quality | MOS, near- and far-end QoS with packet loss, jitter, delay, and R-Factor | Test how VoIP calls are transferred through the network and received at the customer premises |

VoIP test selection

VoIP call summary

OneExpert tests VoIP throughout the IP network registration with gateway, test calls on and off the network, and measures near- and far-end IP QoS and MOS.

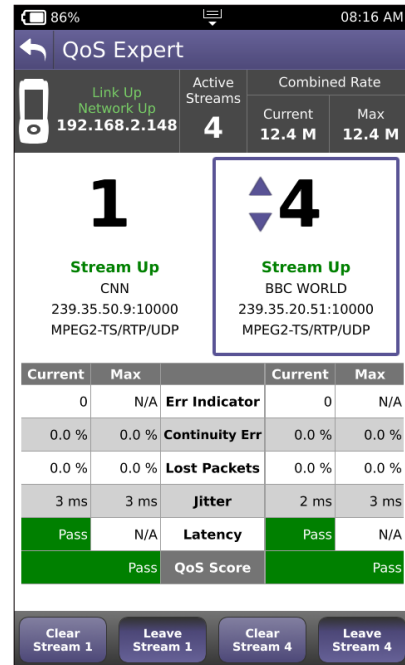

IP Video

OneExpert CATV can test multiple standard and high-definition television (SDTV/HDTV) streams regardless of compression format (MPEG-2, MPEG-4p10/H.264, VC-1, and others) and automatically detects the stream type with the Broadcast Auto feature. The OneExpert CATV IP Video application allows for termination of the IP video stream anywhere in the access network using the Ethernet interface.

Key performance indicators for real-time protocol (RTP) lets the OneExpert CATV precisely measure network QoS and QoE.

Table 5. IP video tests

| IP Video Test | What It Tests | Why It Is Needed |
|------------------------------|--|---|
| IP video stream availability | Access to one or more SDTV or HDTV streams | Content might come from different sources; possible bandwidth limitations if more than one stream is active |
| Quality of service | Key IP video performance indicators such as jitter, loss, latency, error indicator; includes QoS Expert to compare performance between two streams | Easy-to-understand pass/fail metrics if IP video is of good quality |
| Packet loss analysis | Minimum distance, maximum period, RTP loss and errors | Detailed analysis on on Quality of Experience impact |
| Rates analysis | Video, audio, and data substream rates | Bandwidth consumption in relation to total available rates. |
| PID map | PID for video, audio, data | Availability of all stream components |

OneExpert CATV IP Video — QoS Expert

Design Features

With the advent of cloud-based applications, touch-screen interfaces, and always-on, always-connected smartphones and tablets, instrument users have high expectations not only for usability, but also for seamless integration between their devices and the back office. OneExpert design takes all this into consideration to provide a test platform that helps technicians perform more efficiently and fix problems faster. It lets service providers invest in a long-term, open platform.

Upgradeable and Expandable

OneExpert accommodates continually evolving technologies. It includes a field-exchangeable module that offers a fast and simple way to manage, calibrate, and upgrade the RF/DOCSIS portion of the test unit. By simply removing six screws, the RF/DOCSIS portion can be sent for calibration, swapped out for a next-generation DOCSIS standard, or repaired/replaced for a lower total-cost-of-ownership.

Each DOCSIS/RF application module is individually calibrated without the mainframe. This lets operators swap, replace, or calibrate the important measurement section without sending back the entire unit.

Add-On Module Capable

In addition to the RF/DOCSIS application set, OneExpert works with add-on modules. This enables adding technologies in the future such as business-class Ethernet with Y.1564 and RFC.2544 with T1/PRI or OTDR modules. This flexibility addresses the needs of a diverse and ever-changing workforce.

Plant Maintenance Testing

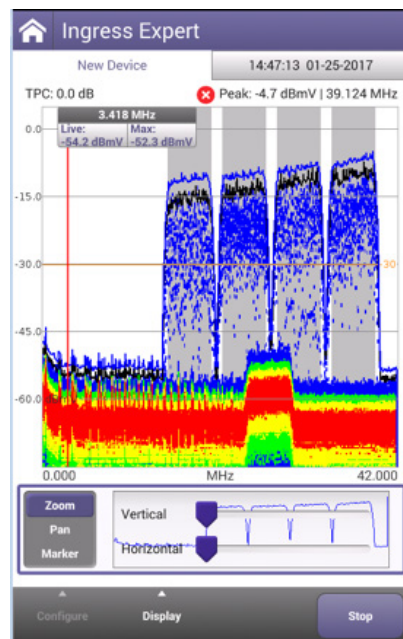

The OneExpert CATV model ONX-630 is designed to meet test challenges for HFC network maintenance technicians, including expert check and analyzer modes, and sweep analysis.

Expert Check Modes – Channel and DOCSIS

Expert modes enable techs to select configured templates to accommodate different test point types with loss compensation and specific limit plans related to the test location. The expert modes allow storage of measurement results for comparison with live data for troubleshooting.

Ingress Expert

A return spectrum heat map enables troubleshooting ingress in upstream channel bands [with UCDs (upstream channel descriptors) identified (mask)] as spectrum components with higher persistence appear with color variations in the display. The Hyper Spectrum mode allows upstream capture of impulse noise events with overlapping FFT without time gaps to avoid missing intermittent noise.

Ingress Expert reveals interference within active return carriers

Return Signal Generator with Loop-Back

A return signal generator with loop-back capability enables aligning/testing return path loss/gain/tilt with up to 8 CW or QAM carriers in the return band at user configurable frequencies and levels. The generated signal can be simultaneously measured on the OneExpert unit to test the characteristics of a local device.

Sweep Analysis

The OneExpert ONX-630 is backward compatible with SDA-5500 and SDA-5510 sweep transmitters, enabling smooth migration to OneExpert sweep and DOCSIS 3.1 performance analysis capability. The headend/hub rack-mounted SCU-1800 Sweep Control Unit provides downstream sweep to 1.2 GHz and upstream sweep to 204 MHz on up to 16 ports (supports OneExpert CATV ONX-630 sweep). The 16 input ports on the SCU-1800 offer improved performance with less combining, an improved noise floor, lower costs, and reduced rack space through consolidation of sweep receivers. The OneExpert CATV ONX-630 coupled with new SCU unit can provide sweep to 1.2GHz. DSAMs operating on the same network are still compatible up to 1GHz. The touch-screen sweep display is easily toggled from portrait to landscape mode. The technician can toggle from absolute level mode to referenced sweep mode, to the alignment mode for quick view of tilt carriers. OneExpert's flexible design allows sweeping on existing infrastructure or expanded return bands up to 204MHz (or anywhere in between). Ideal for sweep testing in distributed access architecture networks, the Sweepless Sweep mode references existing carriers to provide a normalized sweep response for alignment and troubleshooting.

Forward sweep referenced, in landscape mode

QuickCheck Expert Mode

Plant maintenance and headend techs now have a quick way to measure and verify all channel levels utilizing a known channel lineup. The Full Scan measurement allows users to easily verify that all channels are present, as compared to a previously stored channel plan, including a two channel Tilt measurement for aligning active devices. Out of limit or missing channels are indicated in red, making it quick and easy to see if there are any power level issues on all channels tested.

The QuickCheck Expert mode provides a fast and continuously updating Full Scan in landscape mode that can be switched to full screen with a “double tap.”

QuickCheck Full-Scan is displayed in landscape mode

Full screen display

StrataSync

Keeping track of test equipment inventory is typically a challenge for field operation groups. Asset management includes types of instruments, firmware versions, options, and automated test configurations that match standardized methods and procedures. The challenge increases every time a change occurs. Without a means to efficiently collect and analyze test data, valuable information about network health is missed.

StrataSync is a cloud-based, hosted solution that manages assets, configurations, and test data for VIAVI instruments to ensure they are all equipped with the latest software and installed options. It manages inventory, test results, and performance data from anywhere with browser-based ease—improving both technician and instrument efficiency. Operators can then leverage data from the entire network for results analysis and to inform and train the workforce.

There are many options for syncing OneExpert CATV with StrataSync including Ethernet, DOCSIS, or with WiFi (consider the many WiFi hotspots) when a data connection is established. Syncing on a consistent schedule becomes more important as techs are required to upload data to show that all tests for a service activation were performed and show that all tests passed. This provides confidence to the service provider that the installation was performed successfully, and in contractor situations helps to avoid bill-backs due to customer complaints post-installation.

Workforce management is more objective with StrataSync. Supervisors can verify compliance with methods and procedures, and will know which techs need coaching or further instruction. Trend analysis allows identification of problems like: incorrect test configurations or limits causing unnecessary retests; geographic clusters of failures that point to outside plant problems; workgroup-wide issues that may indicate a training deficit.

StrataSync provides insight into installation quality and trends, while enabling methods and procedures compliance verification. This leads to higher customer satisfaction as techs get the job done right the first time, reducing repeat visits.

Table 6. StrataSync capabilities

| StrataSync | What It Does | Why It Is Needed |
|------------------------|---|--|
| Asset management | Manages and tracks test instruments by displaying assets, modules, versions, and locations. Maintains accurate instrument configuration and setup. Provides visibility into instrument usage. | Eliminate time wasted on instrument setup. Reduce repeats with correctly configured instruments. Improve results and reduce operating costs. |
| Data-result management | Collects and analyzes results with centralized collection and storage, secure visibility from anywhere, and consolidated test data/ metrics. | Access more data with centrally collected results for better use. Speed problem resolution by sharing data for faster troubleshooting. Drive compliance by tracking and comparing technician performance. |
| Updates the workforce | Informs and trains the workforce through alerts, release notes and manuals, and a comprehensive product-knowledge library. | Inform the workforce using a single source for instrument status, new capabilities, and educational content. Improve performance with quick access to training and troubleshooting information. Stay current with alerts for expiring warranties and overdue calibrations. |

Specifications

| Frequency | | | |
|---|-----------------------|----------------------------------|--|
| Range | Diplexer | Upstream | Downstream |
| ONX-620, ONX-630 - Automatically Switching Diplexer | 42/85 | 4 - 42 MHz and 4 - 85 MHz | 54 - 1,004 MHz and 108 - 1,218 MHz |
| | 65/204 | 4 - 65 MHz and 4 - 204 MHz | 83 - 1,218 MHz and 258 MHz - 1,218 MHz |
| Accuracy | ±10 ppm typical @25°C | | |

| Downstream Analysis — Port 1 | |
|-------------------------------|---|
| AutoChannel plan builder | Auto detection of channel parameters (analog/digital, symbols, QAM) |
| Max input power | 60 dBmV total integrated power |
| Operation on powered tap | Operate with up to 90 V AC/DC on input port |
| Power detection/ notification | Notify of AC/DC power presence on port 2 above 2 Volts |
| Return loss | >9 dB |

| Upstream Analysis — Port 2 | |
|-------------------------------|--|
| Ingress spectrum scan | 0.5 – 204 MHz |
| Sensitivity | –45 dBmV |
| RBW | 300 kHz |
| Min detectable level upstream | –55 dBmV |
| Dynamic range | ONX-630 – 60dB; ONX-620 – 50dB |
| Max total integrated power | 55 dBmV, 4 – 10 MHz; 60 dBmV, 10 to 204 MHz |
| Accuracy | ±2 dB typical at 25°C |
| Sampling rate | Hyper Spectrum™ FFT gapless technology - no missed samples, spans 0.5 -110 MHz, 110 to 160 MHz, and 160 to 204 MHz |
| Return loss | >9.5 dB |
| Operation on powered tap | Operate with up to 90 V AC/DC on input port |
| Power detection/ notification | Notify of AC/DC power presence on port 2 above 2 Volts |

| Upstream Signal Generator | |
|--|---|
| Number of signals generated simultaneously | From 1 to 8 |
| Signal types | signals either all CW or all modulated |
| Modulation supported | QPSK, 16 QAM, and 64 QAM |
| Symbol rates supported | 5.12, 2.56, 1.28, 0.64, 0.32, and 0.16 Msym/s |

Specifications Continued

| Analog Channel Measurement | |
|---|--|
| Video and audio levels (dual) | |
| Standards | NTSC , PAL, SECAM |
| Min detectable signal | -50 dBmV (single channel) |
| Level accuracy | ±1.5 dB from -20 dBmV to +50 dBmV typical at 25°C; ±2.0 dB, -10°C to +50°C |
| RBW | 300 kHz |
| Carrier to Noise | |
| Channel types | NTSC , PAL, SECAM, non-scrambled |
| Range | 30 to 51 dB (NTSC, 4 MHz measurement bandwidth) |
| Required input level | 0 to +40 dBmV with 77 analog channels present, maximum ±15 dB tilt 50 to 1,000 MHz |
| Accuracy | ±2.0 dB within specified measurement range ≤ 600 MHz |
| Downstream Digital Channel Analysis | |
| Calibrated power levels | -20 dBmV to +50 dBmV |
| Level accuracy | ±1.5 dB from -20 dBmV to +50 dBmV typical at 25°C; ±2.0 dB, -10°C to +50°C |
| Modulation(s) | 64, 128, and 256 QAM, OFDM |
| Annex A: 5.057 to 6.952 MSPS | |
| Annex B: 5.057 for 64 QAM and 5.361 MSPS for 256 QAM | |
| Annex C: 5.274 MSPS for 64 QAM and 5.361 MSPS for 256 QAM | |
| Regional demods | DVB-C |
| Full span MER | |
| Ingress under carrier — full span ingress noise trace | |
| Group delay and in-channel frequency response (ICFR) | |
| Digital quality index (DQI) over time | |
| Errored/severely errored seconds | |
| Level, measured symbol rate, carrier frequency, modulation, interleaver depth | |

| OFDM Signal Performance Metrics | |
|--|---|
| OFDM Channels | 24 - 192 MHz wide - up to 3 active OFDM channels |
| Level — max, min, average, standard deviation | relative to a 6 MHz carrier per CableLabs® |
| MER — max, min, average, standard deviation, percentile | 12 to 50 dB |
| MER channel band graph | max, min, avg across entire OFDM carrier |
| Noise | max |
| Echo | dBc |
| ICFR | in-carrier frequency response (dB) |
| Spectrum/IUC | spectrum display, including carrier and ingress under carrier |
| OFDM Profile Analysis | |
| Profiles A, B, C, D, NCP, and PLC (more profiles as implemented) Lock status, codeword errors (corrected and uncorrected) | |
| DOCSIS Testing | |
| Supports DOCSIS 3.1 bonding up to 32 SC-QAM + 2 OFDM downstream channels, 8 SC-QAM + 2 OFDMA upstream channels | |
| Compliant with CableLabs® specifications for DOCSIS 3.1 | |
| Compliant with CableLabs® specifications for DOCSIS 3.0 (32x8 bonding) | |

Specifications Continued

| Displayed DOCSIS Results | |
|--------------------------|---|
| Top level | Number of bonded channels, min receive level, max BER (pre-FEC), min and max MER, max transmit level, max ICFR (in-channel frequency response) |
| Details | Downstream SC-QAM (over time charts: level, MER, BER, DQI), Upstream (charts: transmit over time, upstream ICFR, upstream EQ taps) |
| Service tests | Registration, Throughput, Ping/Traceroute, Packet Quality; cable modem pass-through |
| OFDM | OFDM selected in scan, number of subcarriers, PLC lock status, frequency, level, and MER, CWE (corr, uncorr); OFDM channel(s) - Level variation (max, min, avg), MER variation (max, min, avg), ICFR, profile analysis (locked, CWE corr, CWE uncorr) |

| Downstream | |
|-----------------|---|
| Frequency range | 54/85/108/258 to 1,000/1,218 MHz (dependent on currently active diplexer frequency) |

| Upstream | |
|----------------------------|--|
| Frequency range | 5 to 204 MHz (dependent on currently active diplexer frequency) |
| OFDMA channels | ≥2, per DOCSIS specification |
| Transmit level range (max) | +61 to +48 dBmV depending on modulation format and number of bonded carriers, per DOCSIS specification |
| SC-QAM channels | up to 8 per DOCSIS specification |

| MER | |
|--|---|
| Specified range ¹ (with input level -5 to +20 dBmV) | 21 to 40 dB, 64 QAM; 28 to 40 dB, 256 QAM; 16 to 44 dB OFDM |
| Max displayable range | 50 dB |
| Resolution | 0.1 dB |
| Accuracy | ±2 dB typical at 25°C |
| Minimum lock level | -15 dBmV |
| BER — ChannelCheck and DOCSISCheck mode | Down to 1E-9 (pre and post FEC) |
| BER — OneCheck mode | Down to 1E-8 (pre and post FEC) default; 1E-9 user selectable |
| Interleaver depth | 128, 8 max |

| Display/Interface/Usability | |
|---------------------------------------|----------------------|
| High-brightness color LCD (800 x 480) | 5 inch diagonal |
| Touch screen | Capacitive |
| Hard key navigation capable | |
| Boot time | Approximately 20 sec |

| Environmental | | |
|------------------------|--|---------------------------|
| For indoor/outdoor use | IP 54 light rain (0.5 in/hr; 1.27 cm/hr) | |
| Pollution | 2° | |
| Drop | 1 m (3.3 ft) onto concrete | |
| Temp range | Operating | -10 to 50°C (14 to 122°F) |
| | Storage temp | -20 to 60°C (-4 to 140°F) |
| Humidity | 10 – 90% RH non-condensing | |
| RF immunity | 8.5 V/m (for CATV measurements) | |
| Maximum altitude | 4000 m (13,123 ft) | |

1. MER range declines as input levels decrease. Expected MER range at MIN LOCK level of -15 dBmV

Specifications Continued

| Input/Outputs | |
|--|--|
| RF (2) | F connectors replaceable |
| Port 1 | Downstream 54/85/108/258 MHz depending on diplexer |
| Port 2 | Upstream 4 – 204 MHz and TDR |
| USB host (2) | |
| Ethernet (2) | RJ45 10/100/1000T |
| Power | Polarized |
| Remote Access/Connectivity | |
| VNC accessible via IP address | |
| HTTPS file access via IP address | |
| Mobile application via Bluetooth | |
| Battery | |
| Field replaceable 96 W/hr 10.4 V, 10-cell Lilon | |
| Typical battery life | 6 – 8 hr continuous, 15 – 20 hr typical usage |
| Battery charge time | 4 Hrs (90%) 6 - 8 Hrs 100% (AC charger) |
| StrataSync Reporting Capability | |
| Session based (job/work order) file saving of results gathered at TAP, GB, and CPE | |
| Measurement screen capture save and recall | |
| StrataSync Core | Asset and data management |
| StrataSync Plus | Optional extended data management (6 years) |
| Warranty | |
| Mainframe & Module(s) | 3-yr warranty (See http://www.viavisolutions.com/services-and-support/support/warranty-terms-and-conditions for warranty details) |
| Accessories and battery | One-year warranty |

| Weight | |
|-------------------------------------|---|
| ONX-620 & ONX-630 | 5.95 lb (2.7 kg) |
| Protective case and shoulder strap | 0.95 lb |
| WiFi | |
| Test interface | 802.11 a/b/g/n (2.4/5 GHz) |
| Tests | WiFi scan; WiFi access point (2.4 GHz only) |
| Scan results | SSID (secure set identification); Channel; Security setting; Power level; MAC address |
| Scan modes | AP list (access point); Channel graph; Time graph |
| Access point (IPX, TSX models only) | Configure OneExpert CATV as WiFi access point (Ethernet to WiFi bridge) |

Specifications Continued

| WiFi Advisor (sold separately) | |
|--|--|
| Test Device | WFED-300AC; Test Interface; 802.11 a/b/g/n/ac 3x3; Band support for 2.4 GHz and 5GHz |
| BSSID View | Real-time RSSI; Noise; SSID; BSSID/MAC; Channel utilization; Channel width; Security; Standard; SN; |
| Channel View | RSSI; Channel utilization; Noise; Channel score by channel; Best channels recommendation |
| Spectral View | Real-time spectral measurements; Max hold |
| Site Assessment Assistant | TrueMargin™ measurement |
| TrueSpeed Option | |
| Test Interface | Ethernet 10/100/1000, RJ45; Settings; Primary server; Fallback server; Profile with committed information rate (CIR) for upload and download |
| Measured and Calculated Results | Actual rate download/upload; Ideal rate download/upload; TCP efficiency; Round trip time (RTT); Maximum segment size (MSS) |
| Report Results | Committed information rate (CIR); Actual throughput; Target throughput; Saturation window; Target TCP throughput; Maximum segment size (MSS); Maximum transmit unit (MTU); Round trip time (RTT); Round trip time base; Maximum average throughput; Maximum peak throughput; Maximum window size; Window size per connection; Connections; Aggregate window; Actual throughput; Target throughput; Buffer delay; TCP efficiency; Total retransmits |
| Standards | VIAVI TrueSpeed VNF; RFC-6349 |

| IP Video Option | |
|--|--|
| Test Interface | Ethernet 10/100/1000, RJ45 |
| Modes | Terminate |
| Set-Top Box Emulation | IGMPv2 and v3 emulation client; RTSP emulation client |
| Service Selection | Broadcast auto; Broadcast MPEG2-TS/UDP; Broadcast MPEG2-TS/RTP/UDP; Broadcast RTP/UDP; Broadcast rolling stream; Broadcast TTS/UDP; Broadcast TTS/RTP/UDP; RTSP MPEG2-TS/(RTP)/UDP; RTSP MPEG2-TS/(RTP)/TCP; RTSP RTP/UDP; RTSP RTP/TCP |
| Video Settings | IPv4 IGMP version 2, 3; RTSP port; RTSP interoperability normal, Oracle, Siemens; IPv6 MLD version 2, 3 |
| Video Source Address Selection | IP address and port number; IP address, port number, and VoD URL extension; RTSP port select; RTSP vendor select |
| Video Analysis Per Video Stream | Simultaneous stream support; 6 terminate; Number of active streams; Combined rate, current/max |
| QoS | Error indicator current/score; IGMP latency current/score; RTSP latency current/max/score; PCR jitter current/max/score/history; RTP packet jitter current/max/score/history; RTP lost current/max/score/history; Continuity error lost current/max/score/history; Overall current/max/score/history |

Specifications Continued

| IP Video Option (continued) | |
|--|--|
| Packet Loss Statistics | RTP loss distance errors current/max/total; RTP loss period errors current/max/total; Minimum RTP loss distance; Maximum RTP loss period; RTP packets lost count; RTP OOS count; RTP errors count; Continuity errors count; Ethernet RX errors, RX drops count |
| Video Stream Data Results (current/min/max/average) | Total, IP, Video, Audio, Data, Unknown |
| Transport Stream Statistics | Error indicator count; Continuity errors count; Sync errors count; PAT errors count; PMT errors count; PID timeouts count; Service name; Program name |
| QoS Expert | Compare two streams for error indicator, lost packets, jitter, latency |
| PID Analysis (each stream) | PID number; PID type (video, audio, data, unknown); PID description |
| Layer Correlation | Combined result view for Ethernet RX errors, RX dropped, video continuity error, video RTP lost, video loss distance total, video loss period total |
| Standards | RFC 2236, IGMP; RFC 2326, RTSP; ISO (IEC 13818), video transport stream and analysis; ETSI TR 10-290 V2.1, video measurements; TFC 1483, RFC-2684, ATM AAL5 |

| VoIP Software Option | |
|--|--|
| Test Interface | Ethernet 10/100/1000, RJ45 |
| Supported Signaling Protocols | SIP RFS 3621 |
| Supported Codec Configurations (ITU-T) | G.711 u-law/A-law (PCM/64 kbps); G.722 64K; G.723.1 (ACELP/5.3, 6.3 kbps); G.726 (ADPCM/32 kbps); G.729a (GS-ACELP/8 kbps) |
| VoIP Settings | Auto-answer; Local alias; Outbound alias; Proxy gateway; Call control port; 100Rel support; SIP interoperability |
| VoIP MOS | Optimal measurement support |
| Fiber Test | |
| Optical Fiber Power Meter | |
| USB optical power meter | MP-60, MP-80, FI-60 Fiber Identifier |
| Min/max/average optical power level and wavelength | dBm, mW |
| Connector input | Universal 2.5 and 1.25 mm connectors |
| Power source | USB port |
| Selectable pass/fail threshold | |
| Signal QoS | |
| Reference value | |

Specifications Continued

| Optical Fiber Scope | |
|--|---|
| USB optical fiber scope | P5000i |
| Results for zone defects | Pass/fail |
| Results for zone scratches | Pass/fail |
| Low mag field-of-view (FOV) | Horizontal 740 µm, vertical 550 µm |
| High mag field-of-view (FOV) | Horizontal 370 µm, vertical 275 µm |
| Particle size detection | <1 µm |
| Power source | USB port |
| Setting for profile, tip, focus meter, button action | |
| Actions for live mode, test mode, high magnification | |
| Probe model, serial, firmware | |
| Home Network Test SmartID - Coaxial Cable Testing | |
| Test Interface | Coax using SmartID or SmartID Plus; Test Probes (near end): SmartID, SmartID Plus; Settings: Supports any cable coax type with configurable velocity of propagation (VOP) and cable compensation |
| Tests | Locate cable runs with active RFIDs (requires SmartID Plus). Single-ended coax map (SECM) |
| Tests Using SmartIDs as Remote Probes | Locate cable runs with SmartIDs; Dual-ended coax map (DECM) |
| Test Results | Noise, ingress and frequency sweep test summary with pass/fail results; Mapped overview of coax network; Detailed view of cable lengths, faults, splitters, filters, amplifiers; Graphically depicts frequency sweep data |
| Frequency Range | 2 to 1,600 MHz |

| Standard Accessories | |
|---|--|
| Protective case with hand strap and detachable shoulder strap | |
| AC power supply with choice of country-specific adaptor plug | |
| Quick start guide | |
| StrataSync Core support | |
| ISDB-T Module | Specifications |
| Frequency Range | 130-767 MHz |
| Resolution | 0.1 MHz |
| Channel Bandwidth | 6 MHz |
| ISDB-T Measurements | |
| Modulation type | DQPSK, QPSK, 16 QAM |
| TMCC Parameters | 64QAM(Auto Detection) TMCC parameters: Mode, GI, Layers (Auto Detection) |
| Lock Range | 45 to +110 dBuV (total integrated power) |
| MER Range | 33dB |
| MER Accuracy | +/- 2dB typical @ 25C ¹ |
| BER | Pre-RS BER range ² : 1E-2~1E-9 Post-RS BER: Pass/fail |
| Constellation | |
| Channel Parameters identified | Modulation, GI, Segments, CCR, Mode, Interleaver |
| User Selection | Channel Center Frequency Layer A, B, or C |

¹ MER Accuracy Range: 15~27dB Single Channel Input level: 60~100 dBµV Additional ±0.5 dB from -10 to 50°C Temp MER is not supported when DQPSK is on a non-partial reception layer

² BER performance optimized for 200-760 MHz, Typical performance in network 1E-8
